

Major Die & Engineering Co.

Quality Metal Stamping Specialists ▪ Long & Short Runs ▪ In-House Tooling

History

Established by Theodore Fett in 1956, Major Die & Engineering Co. has been family owned and operated for over 50 years and continues in this tradition today.

James Fett, Sr. and James Fett, Jr. are 2nd and 3rd generation ownership that brings the experience and dedication required to produce the highest quality product in today's fast paced environment, while still providing our clients with *personalized* customer service.

This hands on approach allows our manufacturing process to be adaptable, efficient, and accurate providing the flexibility needed to meet the toughest delivery schedules.

Theodore Fett

About Us

Major Die & Engineering serves clients in the following industries:

- Automotive
- Telecommunications
- Electronics
- Appliance
- Lighting
- Business Machines / Equipment

Our prestigious client list includes:

- Eaton / Bussmann
- Topy Precision Products
- Standard Magneto

Capabilities

Major Die & Engineering metal stamping capabilities produce intricate components through the use of advanced production equipment and our state of the art tool room including:

- Over 20+ production presses ranging in size from 5 to 180 tons able to produce component material thickness from .005” to .500” with the reliability and capability critical to the process.
- Comprehensive tool room operation utilizing the latest CAD/CAM software, computerized machining centers, and advanced wire EDM capabilities to provide exact part reproduction and meet tight tolerances required.
- On-sight full service die maintenance and storage capabilities.
- In-house secondary and assembly operations giving our clients added flexibility.
- Modern 15,000 ft² facility well positioned for shipping & logistic purposes.

Quality

Major Die & Engineering maintains a quality system certified to the ISO 9001:2015 International Standard. The implementation of this quality system, as well as continuous improvement efforts, is a confirmation to our commitment of exceeding our customer's requirements.

Our quality lab, production floor, and tool room utilize the latest in inspection and monitoring equipment to assure compliance and accuracy in meeting client's product specifications.

We have recently added a Micro Vu automated vision system to our quality department to aid in sophisticated inspection criteria and dimensional requirements.
